STUDENT GRADING DATA ANALYSIS PROJECT

Name

Oghenemega George

Tool Used

Microsoft excel

Project Overview

This project focuses on organizing and analysis student academic scores using Microsoft Excel. The dataset contains students' scores across different subjects, which were structured and analyzed to calculate totals, averages, and final grades. The goal of the project is to demonstrate practical skills in spreadsheet data organization, grade calculation , and academic performance evaluation

Method/Approach

The project involves structuring the student score data set in Microsoft excel and applying spreadsheet functions to compute totals, averages, and grades automatically. Excel formulas such as SUM, AVERAGE and logical functions were used to evaluate student performance. The final output is structured grading sheet that allows quick analysis of Students' academic results.

Key Output
